

PGD WITHDRAWN

Anti-Malarials · Atovaquone/Proguanil, Doxycycline, Mefloquine

This Patient Group Direction has been withdrawn and must not be used.

Reason

The withdrawn version names only the adult Malarone tablet (atovaquone 250mg with proguanil 100mg) and authorises it for ·Adults and children ·11 kg: 1 tablet once daily·.

A child weighing 11 to 20 kg requires ONE Malarone Paediatric tablet (atovaquone 62.5mg with proguanil 25mg). The adult tablet is licensed for over 40 kg only. Given as written, the smallest patients in scope receive four times the intended atovaquone dose.

The ePGD consultation tool carried the same recommendation, with no weight banding at any point, and has been withdrawn with the document.

What to do now

Do not supply malaria chemoprophylaxis under this PGD. Refer travellers to their GP or to a travel clinic. Anyone already supplied under it should have their dose checked against weight, and any child under 40 kg checked urgently.

Status

A corrected version adding the paediatric strength and weight bands is in preparation and will be reissued once it has been reviewed and signed. Until then there is no authorised antimalarial PGD.
