

PGD WITHDRAWN

Hypertension (amlodipine)

This Patient Group Direction has been withdrawn and must not be used.

Reason: the instrument, not the medicine

There is no safety concern with the medicine itself. A Patient Group Direction supplies a defined product to a defined group without individual prescriber assessment. This document authorises indefinite supply with a dose-escalation rule, which is the ongoing management of a long-term condition and is not what a PGD is for. Withdrawn on the ruling of Chris Pilkington, Head Pharmacist, 7 September 2026.

What to do now

Do not initiate or continue supply under this PGD. Patients already established on treatment should be referred to their GP or an appropriate prescriber to arrange **continuity. Do not stop a patient's treatment abruptly; arrange continuation first.**

This is reversible

If the service is rebuilt with a prescriber writing a prescription or a Patient Specific Direction, the consultation process and records are unaffected and only the legal mechanism at the point of supply changes.
