

# PGD WITHDRAWN

## Threadworms · Mebendazole

---

**This Patient Group Direction has been withdrawn and must not be used.**

### Reason

The withdrawn version stated mebendazole oral suspension as 5 mg/mL, and gave a 100 mg dose as 20 mL, supplying 40 mL.

**UK mebendazole oral suspension is 100 mg per 5 mL. A 100 mg dose is 5 mL.**

Measured from the actual product, the stated 20 mL is 400 mg, four times the intended dose, and the 40 mL supplied is 800 mg.

### Action required

Destroy or delete any saved or printed copy of the withdrawn version.

Do not supply mebendazole under this PGD until a corrected version is issued.

The service has been removed from the Get Real Health platform in the meantime.

### If you have supplied under this PGD

Contact Get Real Health immediately so the supply can be reviewed.

### Status

A corrected version is being prepared and will be reissued once it has been reviewed and signed by the clinical lead. It will be published in the usual way.

**Withdrawn: 7 September 2026**
